

Plasma Lift

AT REVIVE

The revolutionary Plasma Lift works by touching the surface of the skin with the tip of a special type of needle but the skin is never penetrated.

The needle ensures specific skin cells are destroyed. These are only the dead and dying cells in the superficial outer layer of the stratum corneum, the cells that we continuously shed naturally.

Precise, safe and painless treatment, new skin cells rise from the dermis and superficial blemish like an age spot or skin tag falls away.

The new cells are undamaged and so a series of treatments will dissolve lines and wrinkles as new cells push their way to the surface of the skin. In a similar way a stretch mark can progressively be removed. While it is a slower process there is no pain, no surgical intervention and there are no residual scars.

Renewed firmness tightens up the skin and so the sagging of soft tissue such as around the eyes will be lifted and significantly improved.

Immediately after treatment a granular crust remains, these are very small and easily disguised. Depending on the treatment there may be some slight swelling but you can go back to work immediately after the treatment.

Aftercare is very simple. Immediately after treatment there is always some visible evidence.

Plasma Lift Prices

EYES:

Upper eyelids	£250
Under eye area	£200
Both areas	£400

About Plasma Lift

The revolutionary Plasma Lift procedure creates an electric arc between the pin and the treatment area by touch without penetrating the skin. This partially removes the stratum corneum (the horny, layer).

This superficial damage is precisely controlled to stimulate the natural cellular repairing mechanism to remove or repair tissue exactly where it is needed without causing or leaving any scar and no damage to pigment, by sublimating the skin, a process whereby a solid is turned into gas, it is possible to achieve a lifting and tightening effect comparable to convention cosmetic surgery, without the requirement for a general anaesthetic, any incisions and no damage to surrounding tissue.

WITH THE SAME TECHNIQUE WE CAN ALSO TREAT THE FOLLOWING CONCERNS:

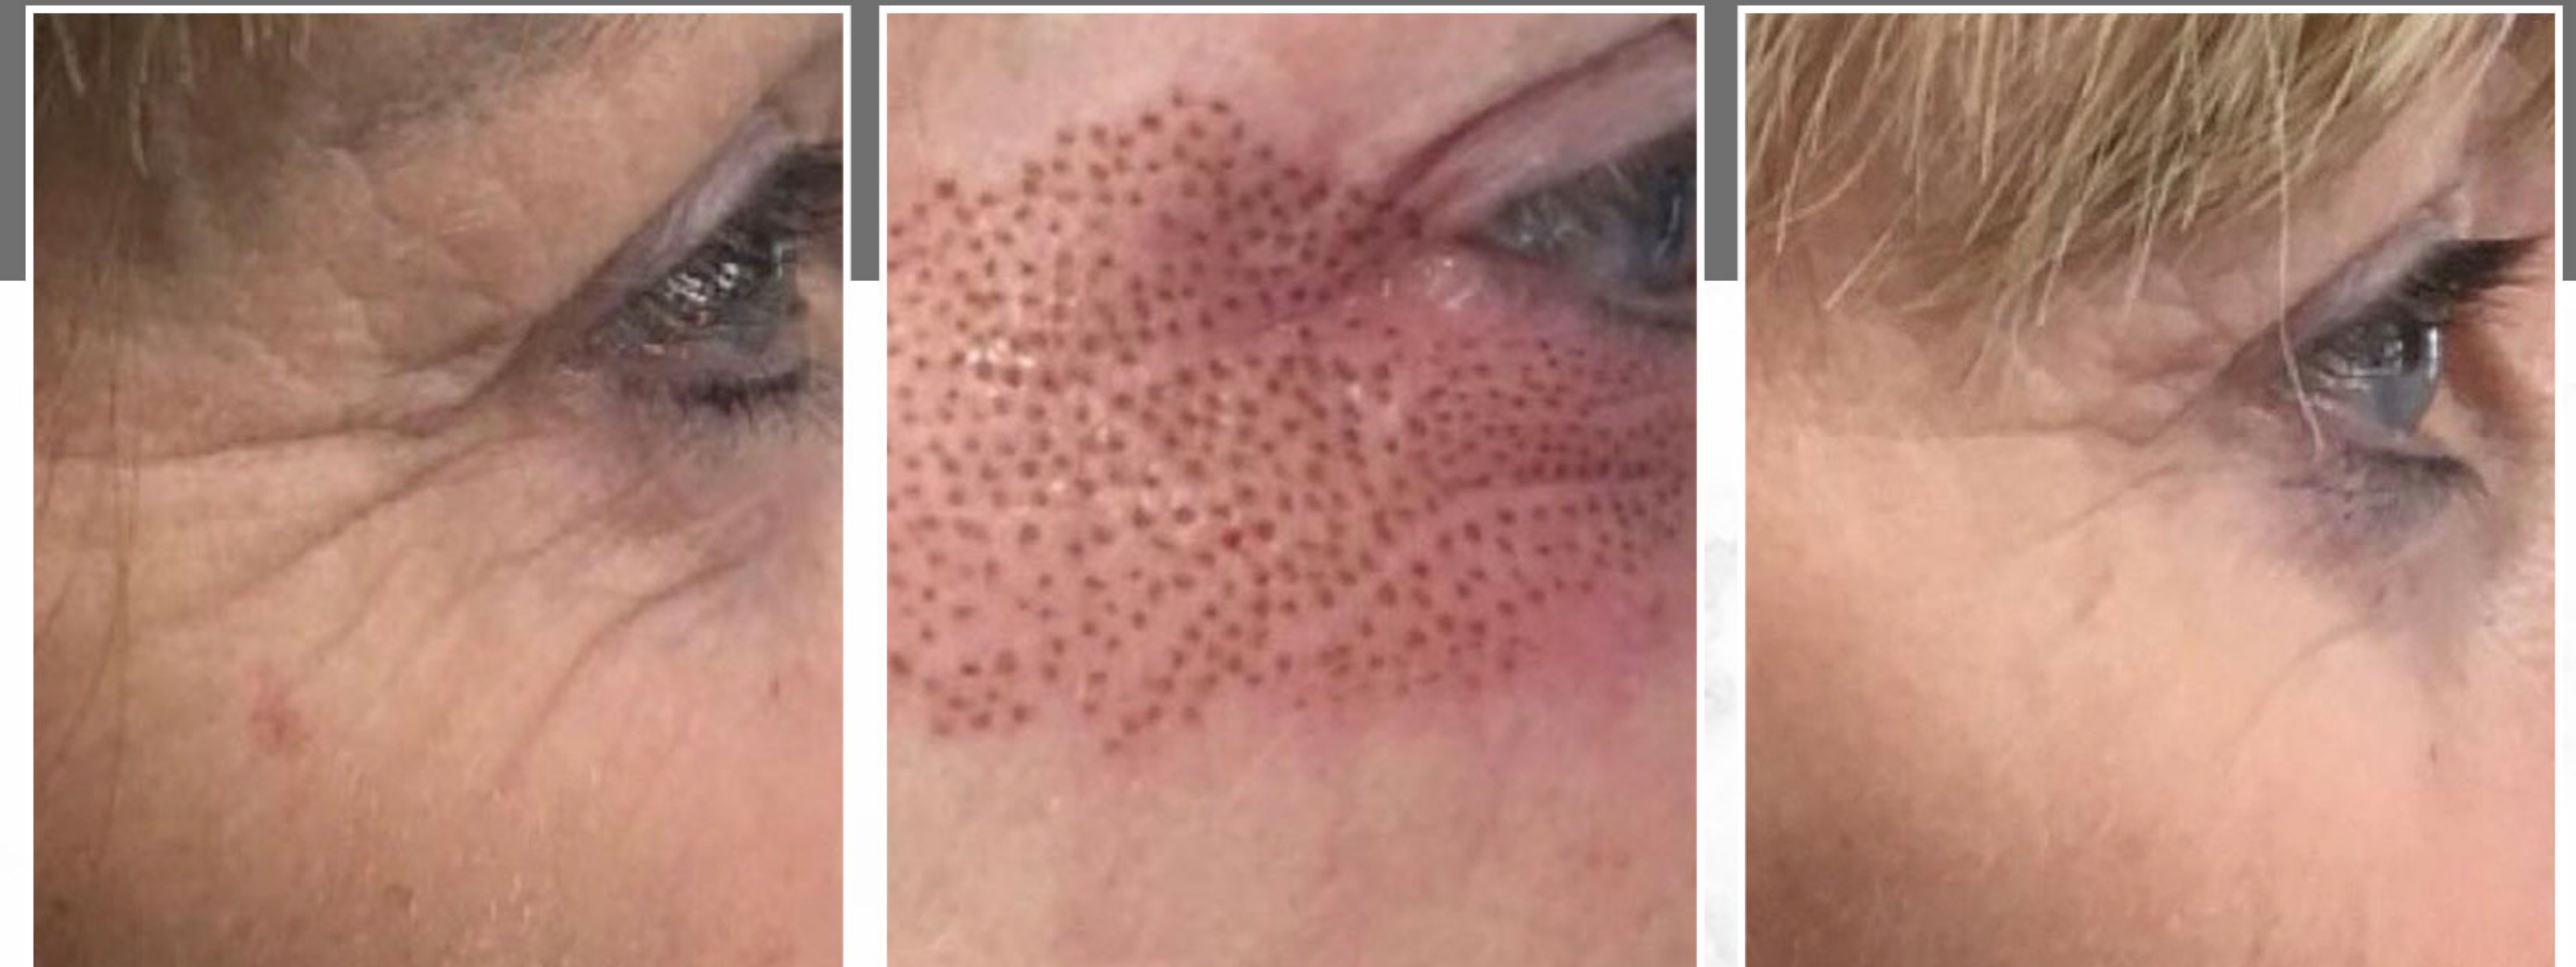

- Wrinkles
- Eyelid Rejuvenation
- Labial Wrinkles
- Age Spots
- Millia
- Large and Small Keloids, Skin Fibroids
- Scars
- Stretch Marks
- Rejuvenation of Hands
- Acne and Acne Scars
- Spider Veins
- Red Veins

Immediate Visible Results

Immediately after treatment there is always some visible evidence. A small age spot will typically be dealt with in one treatment. Treatment around the eyes may require 2-4 further treatments to complete the process.

Wrinkles and stretchmarks depend on the depth and individual condition, on average these tend to be ranging from 4-10 treatments.

Choose Plasma Lift Today

Plasma Lift is a non-invasive treatment to correct and refine aesthetic problems without damaging surrounding tissues including: sagging eye lids and eye bags, lines, wrinkles, lip contour, hand rejuvenation, skin tags, freckles, age spots, pigmentation marks and white spots around the eyes.

The only painless way to dissolve unwanted moles, scars and stretchmarks.
