

## WHAT TO EXPECT DURING AND AFTER YOUR MICROBLADING SESSION?

Entire healing process will take from 4-6 weeks depending on your body regeneration and age.

Your new eyebrows will go through several phases during the healing cycle.

The pigment will appear very natural looking immediately after the procedure. The colour of the pigment will appear much darker the next day.

Note that because of natural skin regeneration, after recovery period (peeling), brows might appear lighter than original. This might give you the impression that colour is fading too quickly. Often even with proper care, customer develop bald spots or lose original hair stroke which make brows look uneven. It is absolutely normal. That's is the reason why most customers need a touch-up after 4-6 weeks.

Once the healing of the skin starts taking place, it will look like dandruff flakes or dry skin. However, this is just superficial colour and dry skin being naturally removed from your eyebrows. The final look of your eyebrows will be apparent approximately 20 days after your procedure.

Never rub the treated area as it will disturb the skin from natural healing.

Once completely healed, always apply a layer of sunscreen SPF 30 up to SPF 50 on your eyebrows when exposed to the sun. Sun exposure might cause the colour pigment to fade away more quickly. When using foundation, be aware when applying to avoid your healed eyebrows. If foundation covers healed brows, your eyebrows will appear lighter.

**Disclaimer:** Microblading can not be performed on anyone who is breastfeeding, pregnant, on blood thinners, diabetic or undergoing radiation or chemotherapy. \*It is recommended to refrain from caffeine and alcohol 4 hours prior to your appointment. \*Botox, chemical peels and microdermabrasion (or any other abrasive skin treatments) should be done no less than 3 weeks before or 3 weeks after having microblading.

**£190 incl. FREE Top-up Session**  
**£50 for Additional Top-up Treatment**

**YOU CAN NOW ENJOY YOUR BEAUTIFUL NEW SEMI-PERMANENT EYEBROWS. YOU WILL SIMPLY LOVE YOUR NEW GORGEOUS FRESH LOOK!**

## WHAT IS MICROBLADING?

Microblading is an advanced technique of cosmetic tattooing that is done by a process of implanting colour pigment beneath the surface of the skin with a row of micro sterile, disposable needles that form a blade which will produce the appearance of hair where there isn't any, or add more to enhance and create fullness where hair already exists. This is with a manual hand tool, not a machine.

## DOES MICROBLADING HURT?

Topical anesthetic cream and gel are used for numbing before and during your procedure. Pain threshold levels vary from person to person and every effort is made to ensure you remain comfortable for the entirety of the procedure. Most clients say it does not hurt at all! However, please note you will be more sensitive on your menstrual cycle.

## TOUCH-UPS

Touch ups are needed for cosmetic tattoo procedures, with each new procedure requiring 2 visits. The initial procedure followed by a touch up procedure 4-6 weeks later. Previously tattooed eyebrows may require one or two additional appointments and rarely achieve the same results to those who have no previous tattoo work because of the existing scar tissue and colour under the skin, even if it isn't visible.

## HOW LONG DOES IT LAST?

The treatment will fade over time and a touch-up is required 4-8 weeks after the initial procedure and then lasts 1-3 years. Frequency of touch-ups depends on a number of factors including sun exposure, skin types, how active the client is, and how fast each individual's cell turnover is. Please note that final results and time frame cannot be guaranteed as each skin type will hold pigments differently and break down at different rates.
